- Improved the productivity of five team members by 10% by introducing Github.
- Reviewed and suggested improvements to the code structure.

Projects:

Attendance marking system linked with AWS | Cloud Computing | S3 Bucket

[Link](#)

- Designed a facial recognition system that takes images from **AWS - S3 bucket**, used the openCV2 and **Boto** libraries, and then marks attendance if the face is recognized.
- The primary goal of this project's design is to save **hardware costs** and use the **cloud** to keep their employees data.
- Used **access and secret keys** to connect to AWS from a local machine.
- The person recognition accuracy of the attendance marking system we built reaches 95%, and it can store a large number of people's names and photos.

Product Management System | Java | Console Based Output

[Link](#)

- Designed a product management application using **java**.
- Where we can **Add products**, Get those added Products and **Search** products by their **names**.

Myntra Clone Website | HTML | CSS

[Link](#)

Fitness application | geeks for geeks competition

[Link](#)

- **Used:** Flutter Development and firebase

Conferences:

ICACIA

- Submitted a conference paper on **Attendance marking system linked with AWS**.
